Project Overview

Game Store Platform is a **college group project** developed as part of a school assignment to demonstrate full-stack web development skills using modern technologies.

The platform is an online marketplace where users can browse available digital games, create accounts, log in securely, and purchase game activation codes through a responsive web application.

The project uses a three-tier architecture consisting of:

- Frontend web application
- Backend REST API
- Cloud database

Technologies Used

Frontend

- Angular
- TypeScript
- HTML
- CSS

Backend

- Java
- Spring Boot
- Maven
- REST API

Database

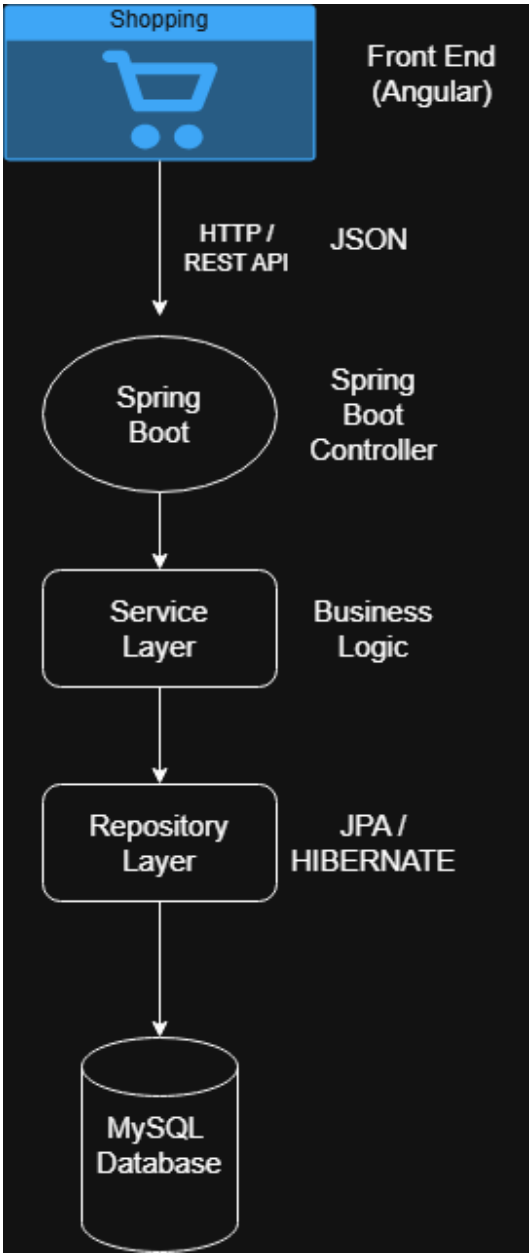
- Supabase (PostgreSQL)

Deployment Platforms

- Firebase Hosting (Frontend)
- Render (Backend)
- Supabase (Database)

System Architecture

User accesses website → Angular Frontend → Spring Boot Backend → Supabase Database



Features Implemented

- User Registration
- User Login
- Browse Available Games
- Product Listings
- Purchase Digital Game Keys
- Responsive Interface
- Secure Backend API

Test Accounts

Admin Account

- Email: admin
- Password: admin

Test User Account

- Email: user@gmail.com
- Password: password
